

PATHFIND FRONTEND DEVELOPER IMPLEMENTATION REPORT

Complete Project Scaffolding, Component Architecture & Figma UI Integration Guide

Project:	Pathfind Mentorship Platform (Product Family 2)
Date:	September 11, 2026
Target Role:	Frontend Developer (React 19 + TypeScript + Vite + Tailwind CSS v4)
Figma Canvas:	https://www.figma.com/design/ml9aOY09sY4KW0hEalPFnw/Untitled

1. Current Frontend Status & Scaffolding Requirement

Important Note for Frontend Developer: The frontend codebase currently contains the initial React + Vite project setup and configuration files (package.json, vite.config.ts, tsconfig.json, eslint.config.js). No UI components or screen flows have been built yet. All components, pages, routing, contexts, and API integration code must be scaffolded and implemented by the Frontend Developer according to the Figma UI Canvas.

2. Recommended Project Scaffolding & Folder Architecture

The Frontend Developer should structure the frontend/src/ directory as follows:

```
frontend/src/
├── assets/           # SVGs, logo, banner graphics
├── components/       # Reusable UI components
│   ├── common/      # Button, Input, Modal, Badge, Spinner, Toast
│   ├── layout/      # Navbar, Footer, Sidebar, PageContainer
│   ├── mentors/     # MentorCard, MentorFilterBar, MentorDetailModal
│   ├── requests/    # RequestCard, RequestStatusBadge, RequestModal
│   └── admin/       # PendingMentorRow, ApproveRejectDialog
├── context/         # React Contexts
│   ├── AuthContext.tsx # Session management, token persistence, user state
│   └── ToastContext.tsx # Global notification toasts
├── pages/           # Top-level Page Views
└── LandingPage.tsx  # ""
```

- | └─ SignInPage.tsx # "/signin"
- | └─ SignUpPage.tsx # "/signup"
- | └─ MentorSignUpWizard.tsx # "/signup/mentor" (5-step wizard)
- | └─ MentorDirectoryPage.tsx # "/mentors"
- | └─ MenteeDashboard.tsx # "/dashboard/requests"
- | └─ MentorDashboard.tsx # "/mentor/dashboard"
- | └─ AdminQueuePage.tsx # "/admin/verification"
- | └─ NotFoundPage.tsx # "404"
- └─ services/ # API Communication Layer
 - | └─ api.ts # Axios instance with Bearer token interceptor
 - | └─ authService.ts # signup, signin, getMe
 - | └─ mentorService.ts # getMentors, getMentorById, signupMentor
 - | └─ requestService.ts # createRequest, getRequests, updateRequestStatus
- └─ types/ # TypeScript Data Interfaces
 - | └─ index.ts # User, MentorProfile, MentorshipRequest, Enums
- └─ App.tsx # Router setup & ProtectedRoute guards

3. Screen-by-Screen Figma Implementation Guide

1. Landing Page & Header (/)

Build Navbar with logo, links, Sign In/Sign Up buttons. Build Hero banner, Search preview, Category Cards (CV Review, Portfolio Feedback, Career Conversation, Interview Prep), and How It Works section.

2. Multi-Step Mentor Registration (/signup/mentor)

Build 5-step wizard form: Step 1 (Account Info & Org Email @company.com), Step 2 (Title & Company), Step 3 (Skill Pills & Request Types), Step 4 (Bio & Availability), Step 5 (Pending Application Screen).

3. Mentor Directory Canvas (/mentors)

Build search bar input, Skill Pills multi-select bar, Verified Badge toggle, and Responsive Grid of Mentor Cards showing avatar, title, skills, and Request button.

4. Mentor Profile Detail Modal (/mentors/:id)

Build Modal view displaying full bio, experience badge, skills list, availability windows, and CTA button to launch Request Modal.

5. Request Submission Form Modal (/requests/new/:id)

Form with Mentor Summary Header, Request Type selector, Subject input, Message textarea, and Link fields for Resume URL, Portfolio URL, and GitHub URL.

6. Mentee Dashboard (/dashboard/requests)

Build Tab filters (All, Pending, Accepted, Declined), Status Cards with status color badges, Contact email reveal box when Accepted, and Cancel button.

7. Mentor Dashboard (/mentor/dashboard)

Build Metric summary cards, Incoming Request Cards with Attachment Link buttons (Resume/Portfolio/GitHub), Accept button (reveals email), and Decline modal with note textarea.

8. Admin Verification Queue (/admin/verification)

Build Pending Applications Table with columns (Name, Work Email, Domain Check, Company, Title, Date) and Approve/Reject action buttons.

4. API Client Service Scaffolding (src/services/api.ts)

Provide Axios client setup with automatic JWT bearer header insertion and 401 interceptor:

```
import axios from 'axios';

const API_BASE_URL = import.meta.env.VITE_API_URL || 'http://localhost:8000';

export const api = axios.create({
  baseURL: API_BASE_URL,
  headers: {
    'Content-Type': 'application/json',
  },
});

// Attach Authorization Token to every request
api.interceptors.request.use((config) => {
  const token = localStorage.getItem('token');
  if (token && config.headers) {
    config.headers.Authorization = `Bearer ${token}`;
  }
  return config;
});

// Intercept 401 Unauthorized errors to clear session
api.interceptors.response.use(
  (response) => response,
  (error) => {
    if (error.response?.status === 401) {
      localStorage.removeItem('token');
      window.location.href = '/signin';
    }
    return Promise.reject(error);
  }
);
```

```
}  
);
```

5. Frontend to Backend API Integration Contract Matrix

UI Component / Action	Method	Endpoint Path	Payload / Query Params
App Mount (Session Restore)	GET	/auth/me	Header: Authorization: Bearer <token>
Signin Form Submit	POST	/auth/signin	{ email, password }
Mentor Signup Wizard Submit	POST	/auth/signup/mentor	{ full_name, email, password, job_title, company, expertise }
Directory Load & Search	GET	/mentors	? query=...&expertise=...&verified_only=true
Mentor Detail Modal	GET	/mentors/{id}	Path Param: {id}
Send Request Modal Submit	POST	/mentorship-requests	{ mentor_id, subject, message, resume_url, portfolio_url }
Dashboard Load Requests	GET	/mentorship-requests	?status_filter=pending
Mentor Accept Request	PATCH	/mentorship-requests/{id}/status	{ status: 'accepted' }
Mentor Decline Request	PATCH	/mentorship-requests/{id}/status	{ status: 'declined', response_message: '...' }
Mentee Cancel Request	DELETE	/mentorship-requests/{id}	Path Param: {id}
Admin Load Queue	GET	/admin/mentors/pending	Header: Authorization: Bearer <admin_token>
Admin Approve Mentor	POST	/admin/mentors/{id}/approve	Path Param: {id}
